Thailand has closed its **health** and **educational attainment** gaps and women participate in the labor market to a large extent, as professional and technical workers.
The country has also achieved the **Millennium Development Goal on gender equality** and promulgated in 2015 the **Gender Equality Act** to protect everyone from gender-based discrimination.
For over a decade, Thailand has been internationally recognized as a regional center for ICT growth and development.
Since 2006, CCDKM and its partners trained 350,000 Thais, more than half are women and girls.
Rural women and girls share for the first time their projects, experiences and stories using ICTs and inspire their peers on the importance of closing the digital divide gap.
Through technology I can promote my business locally and globally.

For the first time, I learned about online marketing and it really made a difference in how I promote my products.

Through ICT and the Internet I can access different channels through which I can sell my products.

Through Internet and ICT I can go beyond borders with my business.

Applying the skills in ICT for business generates more income and job opportunities.

Internet and ICT benefit not only myself but also my community members.

After the social media for business training I feel empowered! I created my own Business Facebook page where I promote my products and story.
Understanding the **needs** of marginalized and disadvantaged **women** and **girls** we have created **training programs on**
